The Plotatious Plot

So to start, Mark Watney and his crew with five others go to Mars. They experience winds up to 125 KPH (77.6 MPH). After surface operations for six sols, they have to abandon the mission because the MAV (Mars Ascent Vehicle) could tip and it can't be replaced (a normal mission is 36 sols, by the way). On there way back, a satellite dish spear hits Watney and crushes his EVA suits biomonitor and knocks him down in the storm. The crew can't find him and his biomonitor looks like he has 0 BP and 0 PR. Per rules, if a ~~man dies on mars, he stays~~

More Plotatious Plot

on Mars. The MAV is about to tip, so the crew launches back to Hermes to leave. Watney is stranded on Mars, with no communications. The Hab (His Mars home) would talk to the MAV which would use it's much stronger radio to talk to Hermes which can talk to Earth. Thats gone. Anyways most of the plot is him doing stuff and almost dying over and over but he stocks a rover with stuff for long distance travel to get to Pathfinder because he can fix it (he's an engineer and botanist) and talk to Earth. He gets it, makes it back, and starts talking. They figure out a plan, and did I mention he

More?

managed to grow potatoes on Mars? He had six times the food for a mission (the 5 others gone) but needed more for his plan to get to the Ares 4 MAV. By the way, he was part of the Ares 3 crew. He then makes a plan with Nasa for the much longer travel to the Ares 4 MAV, and while using a drill that uses much more power than Pathfinder, shorts Pathfinder and kills it. He has no coms now, but he continues the plan. On earth, they had made a plan to get Mark home, and part of it is for the Ares 3 crew to turn around Hermes to go back for

Well, it is a long plot i guess...

Mark so he can fly the Ares 4 MAV to Hermes. He eventually makes it to the Ares 4 site, does some modifications to make it lighter (Hermes is doing a flyby, not a pickup) so it can get higher to Hermes, and eventually makes it and goes home. To describe this in more detail, it would be maybe 20 slides.

I have to do a setting. Guess what?

Mars. Just Mars. Description I hear you ask? A desert planet so old it's literally rusting. That's the red.

Description of Watney

Social (uhh, that's not good for his isolation), funny, Botanist, Engineer, i forgot

Milo's Favorite Part

I like the part where they make a bomb to blow up inside Hermes (a spacecraft) to accelerate.

Review

Best Book Of All Time! 6 Stars!

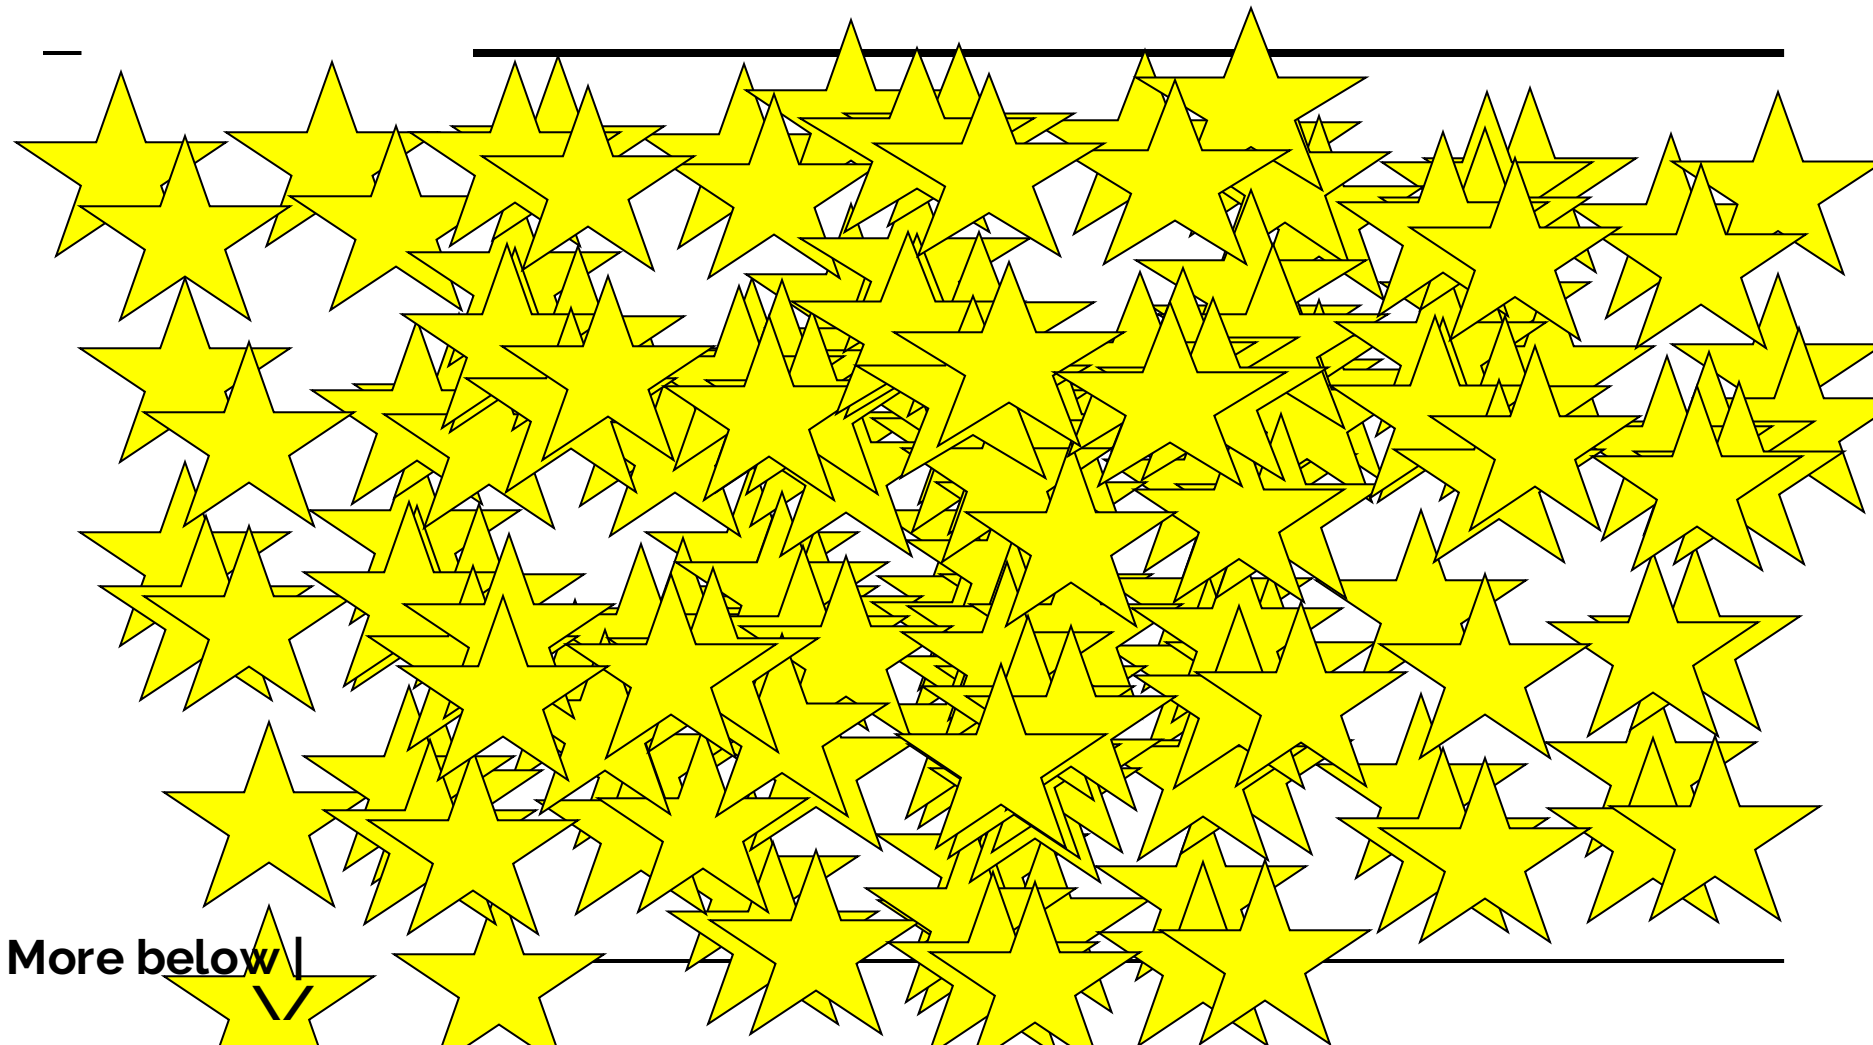

Facts I Learned

Sure, the science is accurate, but i knew that already. Also it's a fiction book.

So yeah, It was good.

Ok I hope you liked it

- And uh I hope I get a good grade
